QB2 Premium Connection

Reverse load-flank hook thread allows for smooth running without galling. This gives EVRlock QB2 greater than 100% pipe body strength in tension. In addition, the steep stabbing flank aids runnabiity, maintaining greater than 100% pipe body strength in compression.

This means that the connection is stronger than the casing it's connecting.

QB2 Premium Connection

As drilling conditions became more severe, the EVRlock QB2 Premium Connection was developed in collaboration with our customers to overcome the limitations of API connections.

With over 20 years of success in the field, the proven thread design of EVRlock QB2 will leave an EVRlasting impression on your next application.
