lock into the connection that's designed to last

EB Enhanced Buttress

EVRlock EB (Enhanced Buttress) builds upon the API Buttress design to create a Pin-on-Pin solution that makes up with the reliability and strength of a shouldered design. Manufactured on high speed threaders in EVRAZ' casing mills, the EB delivers outstanding performance at a modest cost.

- Buttress thread form ensures compatibility with existing API accessories
- Pin-on-pin make-up provides improved torque and a flush ID
- Extended coupling provides increased strength
- Improved mill end geometry ensures reliable field make-up
